Editorial

Volume 10, Issue 2

Dear josha-journal readers,

The josha-Journal looks to the future! In addition to many exciting contributions from various scientific and artistic disciplines, artificial intelligence is a focus of the current issue. First, Hans Burkhardt gives an overview of what artificial intelligence actually is. This contribution is a good starting point for anyone who wants to have a say in this highly topical subject. In addition to the immense opportunities, this topic is also about risks and regulation. Especially in medicine, ethical considerations are very important. Therefore, a Josha team consisting of Neher Aseem Parimoo, Ignacio Mastroleo and Roland Mertelsmann wrote a review on a paper by David W. Bates on the regulation of health algorithms. Furthermore, a team led by Roland Mertelsmann is making great strides in cancer research and deep learning. The analysis of huge amounts of data will be essential in the future to develop better cancer therapies and to fight the disease. A big task!

Stay tuned to us.

Dr. Stephan Seiler
