Editorial Volume 11, Issue 3

Abstract:

Dear josha-journal readers, In this issue, we recommend some important medical articles. Ana Caroline Colombo and Marcio L. Rodrigues study the fungus Cryptococcus neoformans, which can lead to brain infections and is estimated to cause 500,000 deaths each year. Their study suggests that much effort is needed to improve knowledge of how C. neoformans affects brain cells so that new therapeutic tools can be developed in the near future. Ketki Kelkar Ramanan writes about the misuse of laboratory reports in India and discusses the quality of health care. Ana Clara Solon Rufino's article on the positive impact of art classes on socially disadvantaged young people in Belém, Brazil, and Josha's critical review of a publication on the link between social media and anorexia, take a medical-social direction. There is much more in this issue, including articles on artificial intelligence, Oscar Wilde, and education in northern Nigeria. Enjoy the read!
