Editorial

Volume 8, Issue 1

Artificial Intelligence and much more!

Artificial intelligence and data are becoming increasingly important, not only in electronic data processing, but also in medicine in particular. As an oncologist, JoSHA founder Professor Mertelsmann explores the extent to which mathematics and artificial intelligence can help improve cancer therapies. Similarly, Jona Boeddinghaus addresses ethical issues that may arise with the new methods in his paper. The contribution by Alahí Bianchini and Ignacio Mastroleo “Why the biomedical sciences need philosophy” also goes in this direction. Julieta Alcain refers to the subjectivity that even data can have. In addition to this focus, the journal offers many other exciting insights into the work of various scientists and artists.

Now we hope you enjoy reading the journal.

Dr. Stephan Seiler

Vice President

International Academy of Sciences, Humanities and Arts
